# Area<sub>utomotive</sub>

- Area Otomotiv is a leading supplier of customized mechanical joining solutions for the automotive and manufacturing industries worldwide. We manufacture complex, high-precision and critical components for our global business partners. Our performance in terms of cost, quality and on-time delivery makes us an ideal partner for the leading OEMs and Tier 1 suppliers.
- Our commitment to operational excellence and engineering know-how has led our customers to give us new projects that further extended our capabilities. Area Otomotiv has become a reliable partner for applications in the fields of progressive stamping, precision machining, broaching and surface treatments such as grinding, heat treatment and various surface coatings. Our products withstand high temperature and pressure or ensure the safety of the vehicle.
- We target to operate all processes with zero defects and hold ISO 9001 quality management certificate. We are continuously working to improve our quality management systems and lean manufacturing practices to remain a competitive and reliable supplier.
- In today's dynamic global environment with considerably shortened cycle of innovation, we deem our company as a reliable, flexible and competent supplier to develop customized components at short notice and to produce high volumes in series. We work closely with our customers to develop innovative solutions that suit the technical and budget requirements of each individual project. Thus, our customers build long-term rewarding business relationships with us.

# A Reliable Partner For Metal Fabrication Companies

Machine park to produce special components to meet customer specifications:

- Double-spindle double-turret CNC turning lathes
- Sliding CNC turning and milling complex lathes
- Double C axis CNC lathes
- Machining centers

# Machined Parts

# Machined Parts

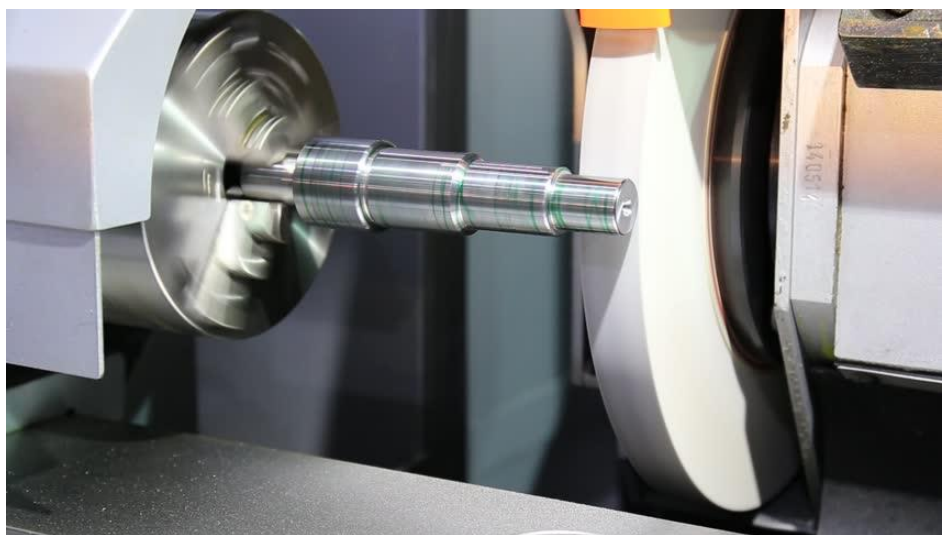

# Machined Parts

## Serial Production Parts

# Grinding Machines

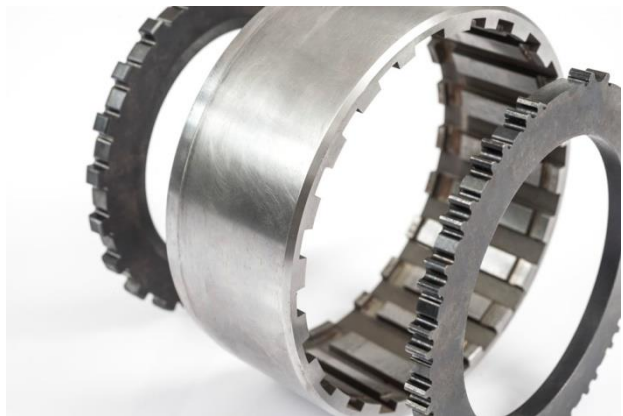

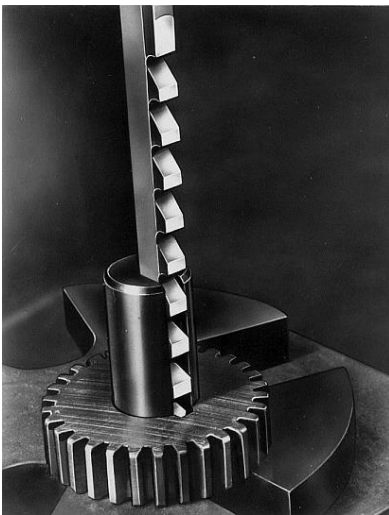

Ability to reach thickness tolerance of 0.01 mm from double-side fine grinding process under serial production

# Broaching

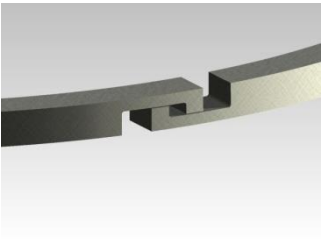

- Vertical external pot broaching and internal form broaching machines ideal for production of customized gear forms
- Cost advantage in serial production relative to machining

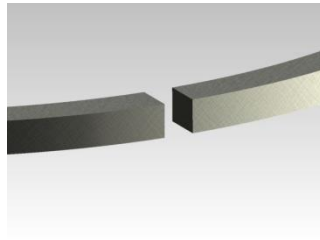

# Custom Circlips

## Piston Rings

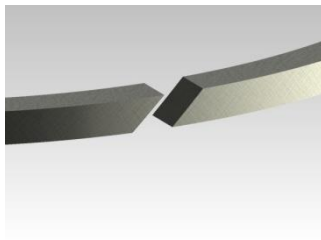

- Production capacity from 15 mm up to 500 mm

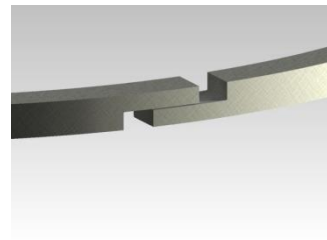

Hook Sealing Rings

Sealing Rings

Angel Cut Sealing Rings

Step Cut Sealing Rings

## Retaining Rings

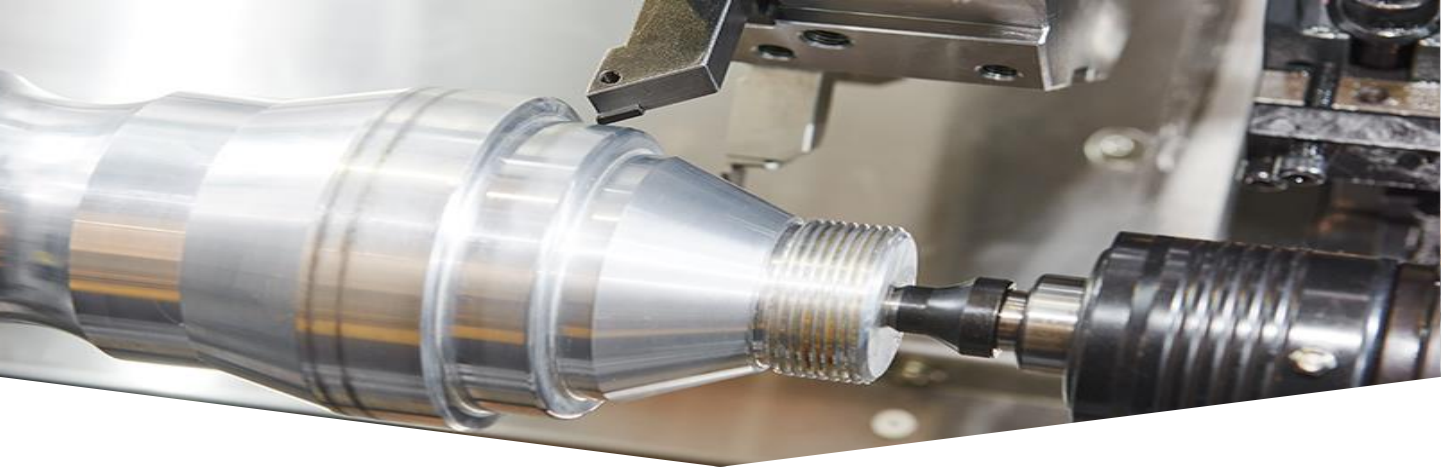

# Quality Control and Packaging

- Zero defects guaranteed by regular inspections at every stage of production
- Provide highest flexibility and delivery reliability;
- Keeping safety stock of finished parts
- Make clear labeling and take protective precautions for the finished parts
